ACE Graphics

*Protecting, supporting and promoting midwifery*

Dear Customer

Thank you for purchasing your model pelvis from ACE Graphics. We trust that it will fulfil your requirements as a teaching aid and that it will enhance your presentations.

We would like you to be aware of the following points which are important for trouble free use:

- This pelvis is hand made from tough polyurethane plastic. Since each is individually crafted, there will be some variation in colour and small bubbles that will not in anyway affect wear.
- Although tough, and unbreakable in normal circumstances, like other plastics, excessive bending will eventually weaken the material. Be especially careful of the coccyx — too much enthusiastic bending will cause it to snap off. Please refer to the Teaching Tips sheet "*Using your doll and pelvis*" for hints on avoiding excessive bending.
- Additional information on how to use your pelvis is contained in the DVD *Skills for Childbirth Educators*, which is available from Birth International. More information about this DVD can be found at [www.birthinternational.com](http://www.birthinternational.com)
